Protect the beauty of your fabrics with STAINFIX Stain Release.

- Keeps fabric looking new, longer
- Makes cleaning easier
- Protects your investment

What is STAINFIX?
A quick-drying formulation which, once applied, forms an invisible barrier around fibres, minimising staining of fabric. Soil and dust are easily wiped or vacuumed away.

What can it be used on?
STAINFIX has been successfully used on most fabrics including: Cotton, Cotton/Polyester, Poly-propylene, Wool, Nyon, Polyester, and back-coated fabrics.

How does it compare?
STAINFIX was tested against a well known leading brand fabric protector. Two samples were submitted for testing. Results ranged from 1 to 5, with 5 being the highest degree of repellency.

<table>
<thead>
<tr>
<th>Test Results</th>
<th>Stainfix</th>
<th>Leading Brand</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sample</td>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>Water Repellency (Dupont)</td>
<td>3-4</td>
<td>3</td>
</tr>
<tr>
<td>Oil Repellency (AATC 118)</td>
<td>4-5</td>
<td>4</td>
</tr>
<tr>
<td>Soil Release (Motor Oil)</td>

</tr>
</tbody>
</table>

As we can see, STAINFIX achieved comparable, if not better, results than the leading brand.

What to do in the event of a spill?
For optimum results cleaning should be carried out immediately. First use a dry absorbent cloth to remove the spill. Then use a wet cloth to clean the fabric.

Does STAINFIX need special care?
STAINFIX treated fabrics can be washed or dry-cleaned, in accordance with the fabric’s care labels, a maximum of five times before requiring re-treatment.

FFI also recommends you take the following precautions:
- Always check fabric care labels
- For spot cleaning, first test on an inconspicuous piece
- Preferable cleaning is via hot water extraction or professional on-site dry cleaning
- For upholstery, do not wet filling
- Do not use hotter water than recommended for the fabric
- Treat spills and stains as soon as possible.
