

WARWICK

White can be a daunting colour to decorate with, and as we all know life can get messy; but thanks to OnGuard you can now protect your fabrics with a unique solution that is added to your fabric in one simple treatment.

OnGuard creates a barrier around every fibre of your fabric, providing resistance and repellency to water, oil and soil base stains. The antimicrobial solution offers a durable layer that stops the development of mould, prevent algal infestations and protect against the development cycle of dust mites, which is the number one trigger for asthma.

Be sure to ask for the OnGuard treatment to be added to your order today

- **Application:** Fabric is fully immersed into a bath of unique OnGuard solution, and then put through rollers to ensure that the fabric is fully impregnated. The fabric is dried and cured to cross link both the repellency and health chemistry.
- **Environmentally friendly and safe:** OnGuard is a water based environmentally friendly, solvent free solution that is safe for people, plants, pets and our planet. OnGuard is also produced using renewable resources.
- **Certification:** OnGuard has been tested to pass stain release as well as fungal and algal growth for Australian requirements. A certificate of authenticity will be supplied with the delivery of your fabric once the treatment is applied.

Don't forget to mention that you would like the added benefit of OnGuard when placing your order. For further information please talk to one of our staff members who will happily provide further clarification.

ONGUARD
Fight stains, mold & mildew
