

ONGUARD

WARWICK

Health & Stain Protection

What is OnGuard?

OnGuard is a unique solution that combines Water and Soil Repellences with an antimicrobial formula that is added to your fabric in one simple treatment.

How does OnGuard work?

OnGuard creates a barrier around every fibre of your fabric, providing resistance and repellency to water, oil and soil base stains. The antimicrobial solution offers a durable layer that stops the development of mould, prevent Algal infestations and protect against the development cycle of Dust Mites, which is the number one trigger for Asthma.

How is OnGuard applied?

Fabric is fully immersed into a bath of unique OnGuard solution, and then put through rollers to ensure that the fabric is fully impregnated. The fabric is dried and cured to cross link both the repellency and health chemistry.

Can any fabric be treated?

Any standard width Warwick Fabric can be treated with the OnGuard formula. Please note wide width fabrics can be treated but will incur additional costs. For further information please talk to one of our staff members who will happily provide further clarification.

Is OnGuard environmentally friendly?

OnGuard is a water based environmentally friendly, solvent free solution that is safe for People, Plants, Pets and Our Planet. OnGuard is also produced using renewable resources.

How to clean your fabric once treated with OnGuard:

We recommend that all spills and stains be attended to immediately in conjunction with the care label and cleaning instructions provided. Please note OnGuard is not a guarantee against stains, for hard to clean stains please seek the advice and action of a professional cleaner.

How long will OnGuard last on my fabric?

The OnGuard treatment will last 4-5 cleans when washed in accordance with our care label and cleaning instructions.

How long will treating my fabric with OnGuard add to my fabric lead time?

The OnGuard treatment will add approx. 7 working days to the delivery of your fabric.

Certification:

OnGuard has been tested to pass stain release as well as fungal and algal growth for Australian requirements. A certificate of authenticity will be supplied with the delivery of your fabric once the treatment is applied.
